

CIRCULAR ECONOMY

The idea of closing the loop sounds like a great plan doesn't it? There are however- as with anything- pros and cons. Let's look at some of them.

PROS

reducing total annual greenhouse gas emissions

reducing pressure on the environment

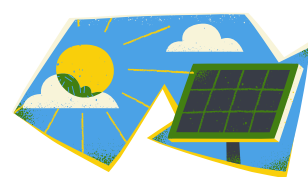

waste prevention

increasing the security of raw material supplies

providing consumers with more sustainable and innovative products that provide savings and a better quality of life

stimulating economic growth

CONS

the need to change legal regulations

imposing new obligations on entrepreneurs

increasing the costs of packaging and waste management

increasing annual recovery and recycling rates

over-reliance on automated processes can put waste workers at risk
